brainystudy

Are you the parent of a 10-13 year old child? Is your child often anxious?

Researchers at the University of Pittsburgh are conducting a research study to better understand how changes in puberty influence brain function and emotional health.

This research study does not involve any medications or treatments.

Participation involves the following:

- A few visits to the University of Pittsburgh over 2 years
- Interviews/questionnaires about moods and behaviors
- MRI scan
- Completing a speech task
- Providing hair and saliva samples

Compensation provided.
