Do you have bipolar disorder? Do
you have children?

A group of researchers at the University of Pittsburgh is seeking individuals with bipolar disorder who have children ages 12-18 to participate in an early intervention study. The study aims to identify effective therapy methods for preventing or slowing the progression of bipolar disorder in children at risk for the disorder.

For more information please call **412-246-5796** or email: KEYSTUDY@pitt.edu

You may be eligible if:

- Parent has a diagnosis of bipolar disorder
- Child (ages 12-18) has **NOT** been diagnosed with bipolar disorder

To find out if you and your child are eligible, scan the code below to complete the screening form!

Participation involves:

- Initial interview about mood and sleep patterns
- Child participates in talk therapy sessions virtually or at the University of Pittsburgh
- Study assessments for both parent and child

Children will be compensated for their participation in the study.
